***Response to Amendment***

The following is in response to the amendment filed on October 24, 2005.

***Allowable Subject Matter***

Claims 1-18 are allowed.

The following is an examiner's statement of reasons for allowance:

The prior art does not disclose or suggest an apparatus having first and second mold members and a flat mold plate for pressing fibrous stock into the mold members, each mold member comprising a porous support plate and rigid mold pieces attached thereto, wherein the mold pieces of the second mold have larger cross-section and lesser taper than the mold pieces of the first mold. Accordingly, the prior art does not disclose or suggest a process for forming three-dimensional fibrous panels using the apparatus, nor discloses or suggests a fibrous panel formed from a fibrous stock using the apparatus. The fibrous panel is deemed to be structurally different from prior art fibrous panel due to the nature of the compression in the molding steps.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

***Response to Arguments***

Applicant's arguments filed October 24, 2005 have been fully considered.

The rejection under 35 U.S.C. 103(a) over Hunt (US 5,277,854) in view of Owens (US 5,900,304) set forth previously has been withdrawn. It is recognized that the applied prior art does not teach providing a second mold having mold members with larger cross-section and lesser taper than for mold members of a first mold. Hunt suggests that the elastic mold members of the second mold may have a larger cross-section, but as argued by Applicant, the shape of the panels and the method of making would not suggest using rigid mold members nor mold members of a second mold with both larger cross-section and lesser taper. Owens discloses a first mold having a porous support plate and rigid tapered mold members, but there is no teaching in Owens or elsewhere in the prior art for further providing a second mold having mold members with both a larger cross-section and lesser taper than the first mold members.

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Hunt (US 6,190,151) discloses first and second molds with elastic mold members, wherein the mold members of the second mold have greater height than those of the first mold.
